

Minteq's technology for its Pferrocal® solid core calcium wire provides steel makers with superior inclusion modification control and optimal calcium addition performance. This technology combined with our new developed MINTEQ Sure-Cal™ injection system, reliably provides our customers with improved quality in steel, productivity and long term value. Pferrocal® calcium wire offers numerous important advantages over powder-filled wire, such as:

- Virtual elimination of wire break issues
- Superior and more consistent calcium recovery
- Lower-cost calcium treatment per ton of steel produced
- Increased shelf life over competitive products
- Improved yield on semi-finished and finished steel products

Our new Sure-Cal Process based on our new designed Compact Lance Unit™ (CLU) and Minteq's disposal tip technology offers Calcium treatments at lowest possible costs and high efficiency. Our CLU technology can be installed with smallest footprint at limited space within the refining process area.
