

Lintorfer Eisengiesserei GmbH, based close to Düsseldorf, is one of the leading producers of ingot moulds and accessories. For more than 50 years this foundry has been specialized in the production of ingot moulds and accessories (plates, bottom plates, trumpets and head boxes) in the materials nodular cast iron (GJS), cast iron with lamellar graphite (GJL) and special cast iron (GJL) in the range of up to 20 t weight per piece. Amongst the numerous customers are steelworks in Germany, Western and Eastern Europe as well as the United States.

Since 2001 Lintorfer Eisengiesserei GmbH is part of the DIHAG HOLDING GmbH. In DIHAG HOLDING GmbH, eight traditional foundries have joined together to form a highly productive corporate group. Under the joint holding umbrella, each subsidiary operates independently as a specialist in its respective market segment.

Due to continuous investments made within the recent years and with a high-performance and highly motivated team of 80 employees in a three-shift operation the capacity could meanwhile be increased to 24.000 t per year.

The design proposals are based on many years of practical experience in the field of ingot moulds as well as upon the knowledge of production allied to operational behavior. Each casting is characterized by an analysis certificate and the specific dimensions. In close cooperation with its customers Lintorfer Eisengiesserei GmbH analyses the operational performance of its products in order to obtain conclusions for further improvements.

In order to guaranty the quality stipulated by the customers, to comply with legal requirements and to permanently improve internal processes, an integrated management system for quality, environmental protection as well as for energy has been installed.
