

Ingot moulds and accessories (plates, bottom plates, trumpets and head boxes) in the range of up to 20 t weight per piece in the materials:

Nodular cast iron – GJS:

The successful results of this material are well proven in the many fields of application of the ingot moulds and trumpets of Lintorfer Eisengiesserei GmbH.

Cast iron with lamellar graphite – GJL:

The use of this cast iron is appropriate for accessories such as bottom pouring plates and bottom plates as well as for special formats of ingot moulds.

Special cast iron – GJL:

This quality with a special analysis (i.a. increased content of carbon) is used for slab moulds and certain bottom pouring plates due to its better thermal conductivity.
